2000 tactical training
missions/year

working 24h/365

IFR/VFR guiding of all
Swiss Air Force aircraft
through whole Switzerland

Tactical Fighter Controller in the ADDC

The Air Defense and Direction Center (ADDC), located in Wangen b. Dübendorf, is responsible for air policing and tactical (training) missions of Swiss Air Force aircraft in whole Switzerland: for example, interception of foreign state/military aircraft overflying Switzerland or the protection from the air of major events like the yearly WEF in Davos.

Furthermore, ADDC is guiding all the different military aircraft types (from helicopter EC635 to fighter jet F/A-18) through the civil airspace to their destinations or training areas and back again to the military airbases. Depending on the weather and requests of the pilots, guidance is done under VFR (Visual Flight Rules) or IFR (Instrument Flight Rules).

The Tactical Fighter Controller works as a close team member together with the fighter jet pilots to achieve the air policing or training mission. Additionally, ADDC is guiding civil test flights and is providing approach service to civil IFR aircraft flying to Sion airport.

We look forward to welcoming you soon. Do not hesitate to contact us for more information.
