Air Traffic Controller in Payerne

A civilian controller on a military airfield

Payerne Air Force Base, which is located in La Broye, is Switzerland's biggest military air facility. The base is used for a range of missions and flying activities, with aircraft that include the F/A-18 Hornet, the F-5 Tiger, the Pilatus aircrafts PC-6/7/9, the Eurocopter and Super Puma helicopters. The aerodrome is also used for civil purposes, though this is limited to business aviation activities. Payerne's business aviation sector is set to expand with several aviation-related companies planning to establish themselves on the site in the next few years. The diversity of the air traffic handled and the range of controller positions available make for a fascinating working environment for anyone interested in serving in the aviation field.

We look forward to welcoming you soon. Do not hesitate to contact us for more information.
